

OPEN ENDED PRACTICAL

AIM

To design and develop a web-based simulator for implementing the , which takes user input and calculates page hits, page faults, and their percentages.

The image shows two screenshots of a web-based LRU Page Replacement Simulator. The top screenshot shows the initial input screen where the user enters the sequence of pages (1 2 3 4 1) and the number of frames (2). The bottom screenshot shows the results screen after clicking the 'Calculate' button. It displays a table of steps, hits, faults, and their percentages.

LRU Page Replacement Simulator

Enter pages (e.g. 1 2 3 4 1)

Enter number of frames

Calculate

Steps

Step	Page	Frames	Status
1	1	1	Fault
2	4	1, 4	Fault
3	8	4, 8	Fault

Hits: 0 | Faults: 3
Hit %: 0.00% | Fault %: 100.00%
